

rotate faster as the speed of the vehicle increases, a greater amount of electricity is produced and, as such, save energy and minimize pollution.

5 5. (Amended) As mentioned in Claim 1 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, the said propeller-type generator units, the said turbine-type generator units, and the said rolling wheel-type generator units can be installed in an arrangement having a single type of generator unit or installed in an arrangement having a combination of generator unit types on the said fossil fuel- and electric-powered vehicle.

6. (Amended) As mentioned in Claim 1 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, the said set of dedicated generator roller wheels of the said rolling wheel-type generator units involves the additional installation of a fifth wheel, a sixth wheel, a seventh wheel, and an eighth wheel.

7. (New) As mentioned in Claim 2 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, a rectifier center situated at an appropriate area of the said fossil fuel- and electric-powered vehicles caches the electric power produced by each said generator unit and , following accumulation, directly supplies electricity to the vehicle or recharges its storage battery; furthermore, since the said generator units rotate faster as the speed of the vehicle increases, a greater amount of electricity is produced and, as such, save energy and minimize pollution.

8. (New) As mentioned in Claim 3 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, a rectifier center situated at an appropriate area of the said fossil fuel- and electric-powered vehicles caches the electric power produced by each said

5 generator unit and , following accumulation, directly supplies electricity to the vehicle or recharges its storage battery; furthermore, since the said generator units rotate faster as the speed of the vehicle increases, a greater amount of electricity is produced and, as such, save energy and minimize pollution.

9. (New) As mentioned in Claim 2 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, the said propeller-type generator units, the said turbine-type generator units, and the said rolling wheel-type generator units can be installed in an arrangement having  
5 a single type of generator unit or installed in an arrangement having a combination of generator unit types on the said fossil fuel- and electric-powered vehicle.

10. (New) As mentioned in Claim 3 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, the said propeller-type generator units, the said turbine-type generator units, and the said rolling wheel-type generator units can be installed in an arrangement having  
5 a single type of generator unit or installed in an arrangement having a combination of generator unit types on the said fossil fuel- and electric-powered vehicle.

11. (New) As mentioned in Claim 2 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, the said set of dedicated generator roller wheels of the said rolling wheel-type generator units involves the additional installation of a fifth wheel, a sixth wheel, a  
5 seventh wheel, and an eighth wheel.

12. (New) As mentioned in Claim 3 of the multiple installation variegated generators for fossil fuel- and electric-powered vehicles of the invention herein, the said set of dedicated generator roller wheels of the said rolling wheel-type

generator units involves the additional installation of a fifth wheel, a sixth wheel, a  
5 seventh wheel, and an eighth wheel.--

**REMARKS**

**Version With Markings To Show Changes Made**

Attached hereto is a marked-up version of the changes made to the claims by the current amendment. The attached pages are captioned VERSION WITH MARKINGS TO SHOW CHANGES MADE.

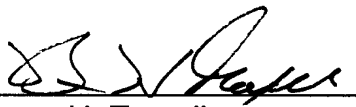

**Summary**

The foregoing amendments eliminate the multiple dependency of claims 4, 5 and 6, thereby reducing the filing fee. An early action on the merits of this application is respectfully requested.

Respectfully submitted,

Date: September 21, 2001
